

Assign an alert to a source

Published: 2018-04-19

Although you configure alert settings from the System Settings window, you assign an alert configuration to a source from the Metrics page in the ExtraHop Web UI. The following procedure shows you how to assign an alert configuration to a device, which is similar for other sources. You must assign an alert to a source before it can monitor your environment.

Before you begin

You must configure an alert before it can be assigned. See [Configure threshold alert settings](#) and [Configure trend alert settings](#).

1. Log into the Web UI on the ExtraHop Discover or Command appliance.
2. Click **Metrics** from the top menu.
3. Click **Devices** in the left pane.
4. Select the checkbox for each device you want monitored by an alert configuration.
5. Click the **Assign Alert** icon from the top of the page.
6. Select the checkbox for each alert configuration you want to assign to the selected devices.
7. Click **Assign Alerts**.

The alert configuration monitors the selected devices for the alert conditions specified in the alert settings.

Tip: You can also manage alert assignments for a device from the device overview page. From the Manage Device section, click **Assignments** to add or remove alert assignments from the device and to view which alerts are already assigned to the device.
