Bundles

Published: 2018-04-19

Bundles are a saved set of system configurations that can be uploaded to an ExtraHop appliance. You can download a number of bundles from the ExtraHop Solution Bundle Gallery ⧉ or create your own. Bundles from the gallery are designed to help you configure your ExtraHop appliances to address specific use cases; for example, the Ransomware Bundle ⧉ configures your ExtraHop appliance to detect and track ransomware activity.

The following system customizations can be saved as part of a bundle:

- Alerts
- Applications
- Custom pages
- Dashboards
- Dynamic groups
- Flex grids
- Geomaps
- Triggers
