

Display device group members in a chart

Published: 2017-11-16

If you have a chart that displays a device group, you can view metrics by top devices in the group, instead of viewing a single value for the entire device group. Drilling down by group member in the Metric Explorer lets you view up to 20 devices in the chart.

The screenshot shows the 'Metric Explorer: Edit Chart' window. On the left, the configuration panel includes:

- Sources:** 'NFS Servers' (with an 'Add Activity Group' button).
- Metrics:** 'NFS Server - Requests' (with 'Count' and 'Any Method' dropdowns, and an 'Add Metric' button).
- Details:** 'Drill down by Group Member' (with a dropdown menu) and 'Top 4 results' (with a text input field).
- An 'Add Source' button at the bottom.

On the right, the chart area displays a bar chart titled 'NFS Servers NFS Server Requests' for the 'Last 30 minutes' period. The chart shows four bars representing different device groups:

Device Group	Value
nfs1-nyc-backhaul	1,439
nfs1-sea-backhaul	1,415
nfs1-syd-backhaul	658
nfs1-lon-backhaul	638

Below the chart is a toolbar with various visualization options: Area, Bar (selected), Box Plot, Candlestick, Column, Heatmap, Histogram, Line, Line & Column, List, Pie, Status, Table, and Value. At the bottom right are 'Cancel' and 'Save' buttons.

If you see fewer groups members in a chart than the number of results you specified, this could be because you selected an activity group with a small number of devices. For activity groups, devices are dynamically placed into an activity group based on the type of protocol traffic they are associated with.

Before you begin

Create a [chart](#) that contains a device group or activity group as the selected source. Save the chart to a dashboard.

1. Log into the Web UI on the Discover or Command appliance and then click **Dashboards** at the top of the page.
2. Launch the [Metric Explorer to edit the chart](#) by completing the following steps:
 - a) Select a dashboard containing the chart that you want to edit.
 - b) Click the chart title and select **Edit**.
3. In the Details field, click **Drill down by <None>**, where <None> is the name of the detail metric currently displayed in your chart. Then, select **Group Member**.
4. In the top results field, enter the number of group members that you want to display. These devices will have the highest metric values. You can display up to 20 group members.
5. Click **Save** to close the Metric Explorer.

Note: If you drill down by group member, you cannot perform additional drill downs to see detail metrics for each device by a key. To see detail metrics by key for a device, we recommend creating another chart with specific devices selected as the source.
