

Remove devices from a static device group

Published: 2020-02-23

You can remove one or more devices from a static device group. For example, you can quickly remove multiple devices that were added to the wrong device group.

1. Log into the Web UI on a Discover or Command appliance.
2. At the top of the page, click **Metrics** and then click **Device Groups** in the left pane.
3. Click the name of the device group. A protocol page for the device group appears.
4. In the left pane, click **Devices**, as shown in the following figure.

5. In the center pane, select the checkbox next to the device names that you want to remove.
6. In the upper right corner, click the **Remove from Group** icon .
7. Click **Remove**.
