

Enable or disable detection markers

Published: 2020-02-23

You can enable or disable detection markers for the current user. When enabled, detection markers are displayed in charts on dashboards and protocol pages and on activity maps to indicate detections associated with the source of the metric data during the specified time interval.

1. Log into the Web UI on the ExtraHop Discover or Command appliance.
2. Click the User icon at the top right corner of the page.
3. From the Preferences section, select or clear the **Show detection markers** checkbox.

Tip: If you want to enable or disable detections markers for a specific page, for example, for a specific visualization of a dashboard in a NOC, you can override the detection marker setting by modifying the page URL. Append the following parameter to the end of the URL:

```
&detectionmarkers={true|false}
```

In the following example, the linked dashboard will not display detection markers.

```
https://your-eda.com/extrahop/#/Dashboard/Y968F/?  
from=30&interval_type=MIN&until=0&detectionmarkers=false
```

To remove the URL override, click **Remove detection markers override** from the Preferences section of the User menu.
