

# Remove devices from a static device group

Published: 2020-02-23

You can remove one or more devices from a static device group. For example, you can quickly remove multiple devices that were added to the wrong device group.

1. Log into the Web UI on a Discover or Command appliance.
2. At the top of the page, click **Assets** and then click **Device Groups** in the left pane.
3. Click the name of the device group. A protocol page for the device group appears.
4. In the left pane, click **Devices**, as shown in the following figure.

5. Select the checkbox next to the device names that you want to remove.
6. In the upper right corner, click **Remove from Group**.
7. In the confirmation dialog box, click **Remove**.
