

Save system settings to the running config file

Published: 2020-06-08

When you modify any of the system configuration settings on an ExtraHop system, you must confirm the updates by saving the running config file. If you do not save the settings, the changes are lost when your ExtraHop system restarts.

To remind you that the running configuration has changed, "(Unsaved changes)" appears next to the Running Config link on the main Admin UI page, as well as a **View and Save Changes** button on all Admin UI pages, as shown in the figure below.

1. Click **View and Save Changes**.
2. Review the comparison between the old running config and the current running config (not yet saved) and then select from the following options:
 - If the changes are correct, click **Save**.
 - If the changes are not correct, click **Cancel** and then revert the changes by clicking **Revert config**.
