

Bundles

Published: 2022-03-08

Bundles are a saved set of system configurations that can be [uploaded](#) to an ExtraHop system. You can download a number of bundles from the [ExtraHop Solution Bundle Index](#) or [create your own](#). Bundles from the index are designed to help you configure your ExtraHop system to address specific use cases; for example, the Active Directory Bundle configures your ExtraHop system to monitor Active Directory activity.

The following system customizations can be saved as part of a bundle:

- Alerts
- Applications
- Dashboards
- Custom Detections
- Dynamic Device Groups
- Record Queries
- Record Formats
- Triggers

Learn more about creating and sharing bundles with the [Bundle Best Practices Guide](#).
