

Change the time interval for a dashboard region

Published: 2025-03-17

In a dashboard, you can apply a time interval to an entire dashboard with the Global Time Selector, or apply a different time interval per region with the Region Time Selector.

1. Log in to the ExtraHop system through `https://<extrahop-hostname-or-IP-address>`.
2. At the top of the page, click **Dashboards**.
3. Select a dashboard.
4. Click the region header and then select **Use Region Time Selector**.
5. Click **Last 30 minutes** and complete one of the following steps:
 - From the Time Interval tab, select one of the following options:
 - Select another time interval (such as **Last 30 minutes**, **Last 6 hours**, **Last day**, or **Last week**).
 - Specify a custom unit of time.
 - Select a custom time range. Click a day to specify the start date for the range. One click will specify a single day. Click another day to specify the end date for the range.
 - **Compare metric deltas** [🔗](#) from two different time intervals.
 - From the History tab, select from up to five recent time intervals selected in a previous login session.
6. Click **Save** to close the Region Time Selector.
The new time interval is applied to all charts and widgets within the region.
7. To remove the region time interval, click the region header and select **Use Global Time Selector**.
When the time interval disappears from the region header, the global time interval is applied to the region.
