

# Create a system notification rule

Published: 2024-04-02

Create a notification rule to email a recipient list whenever system events occur such as sensor connection concerns, unsupported firmware versions, and license issues.

The ExtraHop system creates a default system notification rule that includes all system events and is assigned to the initial Administrator to log in to the console. You can disable or edit the default rule.

## Before you begin

- You must be logged into a console with full write [privileges](#) to change these settings.
- The ExtraHop system must be [connected to ExtraHop Cloud Services](#) to send notifications through email.
- Email notifications are sent from [no-reply@notify.extrahop.com](mailto:no-reply@notify.extrahop.com). Make sure to add this address to your list of allowed senders.

- Log in to the ExtraHop system through `https://<extrahop-hostname-or-IP-address>`.
- Click the System Settings icon  and then click **Notification Rules**.
- Click **Create**.
- In the Name field, type a unique name for the notification rule.
- In the Description field, add information about the notification rule.
- In the Event Type section, select **System**.
- In the System Events section, select the types of events you want to include in the rule.

Option	Description
Sensor connection warning or error	Sends a notification if a sensor is offline, disconnected from the console, or requires additional configuration.
Sensor firmware upgrade available	Sends a notification if the firmware on a sensor is unsupported and should be upgraded or if a newer firmware version is available for a sensor and the version is not later than the console firmware, if connected.
License warning or error	Sends a notification for sensor license states that need attention such as a license that is invalid, disconnected, expiring, or pending.
Recordstore error (Reveal(x) 360 only)	Sends a notification if the recordstore cannot connect to a sensor to receive records and if a connection is restored.
Recordstore ingest warning (Reveal(x) 360 only)	Sends a notification if recordstore ingest is near (exceeds 80%) or over (exceeds 100%) your daily record ingest capacity.

- Specify individual email addresses, separated by a comma.
- In the Options section, click the **Enable notification rule checkbox** to enable the notification.
- Click **Save**.
