

# Sensor and console post-deployment checklist

Published: 2024-04-27

After you deploy an ExtraHop sensor or console, log in to the Administration settings on the ExtraHop system through `https://<extrahop-hostname-or-IP-address>/admin` and configure the following settings. Refer to the section of the [ExtraHop Admin UI Guide](#) specified in each action below, except where noted.

## Password

Maintain system security after the evaluation period. Change the default password. For more information, see the [Default User Accounts FAQ](#).

## NTP

Time is critical in the ExtraHop system, particularly when doing event correlation with time-based metrics and logs. Verify that the NTP settings are correct for your infrastructure, test settings, and sync NTP. For more information, see [Configure the system time](#).

## Time Zone

The correct time zone is critical to run scheduled dashboard reports at the correct time. Ensure the ExtraHop system has the correct time zone. For more information, see [Configure the system time](#).

## Remote Authentication

Set up remote authentication. The ExtraHop appliance integrates with [LDAP](#), [RADIUS](#), [SAML](#), and [TACACS+](#).

## Firmware Update

The ExtraHop firmware is updated often with enhancements and resolved defects. Verify that you have the current firmware. For more information, see [Upgrade the firmware on your ExtraHop system](#).

## Audit Logging

The ExtraHop system can send events to a remote syslog collector. For more information, see the [Send audit log data to a remote syslog server](#).

## SMTP

The ExtraHop system can email alerts and system-health notifications. Set up and test notifications. For more information, see [Configure email settings for notifications](#).

## System Notifications

The ExtraHop system can send email when it detects problems. Create an email group to receive notifications. For more information, see [Configure an email notification group](#).

## iDRAC

Each physical ExtraHop appliance has an iDRAC port, similar to iLO or KVM over Ethernet. Connect and configure the iDRAC port. For more information, see [Configure the iDRAC Remote Access Console](#).

## SSL Certificate

Each ExtraHop system ships with a self-signed certificate. If you have a PKI deployment, generate your own certificate and upload it to each ExtraHop system. For more information, see the [SSL Certificate](#) section.

## DNS A Record

It is easier to access an ExtraHop system by hostname than by IP address. Create an A record in your DNS root ("exa.yourdomain.local") for each ExtraHop system in your deployment. Refer to your DNS administration manual.

## Disk Encryption

Enable security on storage drives to provide encryption on virtual disks (EDA 9300, EDA 10300, and IDS 9380 only). For more information, see [Configure self-encrypting disks \(SEDs\)](#).

## Connect Appliances

Connect the console and sensors to all packetstores and recordstores. For more information, see [Connect the console and sensors to ExtraHop recordstores](#) and [Connect sensors and console to the packetstore](#).

## Cloud Services

Connect to ExtraHop Cloud Services to enable Detections and Remote Access. For more information, see [Connect to ExtraHop Cloud Services](#).

## Threat Intelligence

Configure threat intelligence settings to identify indicators of compromise on your network. For more information, see [Threat intelligence](#).

## Network Localities

Classify non-RFC1918 IP addresses as part of your internal network. For more information, see [Specify a network locality](#).

## Tuning Parameters

Help improve the quality and accuracy of rules-based detections by adding tuning parameters. For more information, see [Specify tuning parameters for detections and metrics](#).

## Advanced Analysis

Target specific device groups or activity groups for Advanced Analysis as needed, based on their importance to your network. For more information, see [Analysis priorities](#).

## Decrypt SSL Traffic

Decrypt forwarded SSL traffic by uploading the private key and server certificate associated with that traffic. For more information, see [Decrypt SSL traffic with certificates and private keys](#).

## Configure Perfect Forward Secrecy (PFS)

Decrypt SSL/TLS traffic from your Linux and Windows servers. For more information, see [Install the ExtraHop session key forwarder on a Linux server](#) and [Install the ExtraHop session key forwarder on a Windows server](#).

## Customizations and Datastore Backup

Create a system backup prior to upgrading firmware, or before making a major change in your environment. For more information, see [Back up a Sensor or ECA VM](#).
