

Save system settings to the running configuration file

Published: 2024-03-26

When you modify any of the system configuration settings on an ExtraHop system, you must confirm the updates by saving the running configuration file. If you do not save the settings, the changes are lost when your ExtraHop system restarts.

To remind you that the running configuration has changed, (Unsaved changes) appears next to the Running Config link on the main Administration settings page, as well as a **View and Save Changes** button on all Administration settings pages, as shown below.

1. Click **View and Save Changes**.
2. Review the comparison between the old running configuration and the current (unsaved) running configuration, and then select from the following options:
 - If the changes are correct, click **Save**.
 - If the changes are not correct, click **Cancel** and then revert the changes by clicking **Revert config**.
