Update Lambda function runtime for ExtraHop flow sensor

Published: 2024-05-15

If you deployed an ExtraHop flow sensor with an AWS Lambda function ⧉ prior to October 2023, you must update the runtime for the function from Go to Amazon Linux. The Go runtime is deprecated as of December 31,2023. After that date, existing functions with the Go runtime will continue to run, but the runtime will not be updated with security fixes.

1. Download the `exflowlogs-lambda.zip` file from the ExtraHop downloads ⧉ page.
2. In AWS, go to the Lambda function you created for your ExtraHop flow sensor.
3. Upload the `exflowlogs-lambda.zip` file.
   a) Click **Upload from**.
   b) Click **.zip file**.
   c) Click **Upload**.
   d) Select the `exflowlogs-lambda.zip` file.
4. In the Runtime settings section, click **Edit**.
5. From the **Runtime** dropdown list, select **Amazon Linux 2**.
6. In the Handler field, type `bootstrap`.
7. Click **Save**.
8. In the Runtime settings section, click **Edit**.
9. In the Architecture section, click **arm64**.
10. Click **Save**.
