

Install a bundle

Published: 2024-11-01

ExtraHop bundles enable you to add pre-configured customizations to the ExtraHop system.

Before you begin

- You must have full write or higher [privileges](#) to upload a bundle.
- You must have personal write or higher [privileges](#) to download and install a bundle.
- You must have a bundle JSON file. You can download a bundle from the ExtraHop system by navigating to **System Settings > Bundles**, selecting the bundle, and then clicking **Download Bundle** from the right pane.

After you have downloaded a bundle, you can upload and install the bundle on your system.

1. Log in to the ExtraHop system through `https://<extrahop-hostname-or-IP-address>`.
2. Click the System Settings icon .
3. Click **Bundles**.
4. Click **Upload Bundle**.
5. In the Upload Bundle pane, click **Choose File**, and then select the bundle JSON file you want to upload. Details about the bundle content appear, including the minimum required firmware version.
6. In the Install Options section, select the following checkboxes:
 - a) (Console only) Select the site where you want to install the bundle.

Note: Bundle customizations such as alerts and triggers are added to the selected sites. However, you can only view, enable, and configure customizations from the ExtraHop system where the bundle was installed.

- b) Select the **Apply included assignments** checkbox.

This option assigns the bundle to the metric sources included with the bundle. In most cases, it is best to apply the default assignments.
 - c) Select the **Overwrite existing content** checkbox.

This option overwrites any objects that have the same name as objects in the bundle. If you have existing system objects with the same name that you want to preserve, you must rename those objects to avoid overwriting them with the objects in the bundle.
7. Click **Install**.

Next steps

- Enable any [triggers](#) included in the bundle.
- Configure any [alerts](#) in the bundle to notify relevant email addresses.
