

Notification rules

Published: 2024-11-02

Notification rules make it easy to quickly distribute information about important events that occur on your ExtraHop system through email and external services.

Users with full write privileges or higher can create notification rules. The notification rules you can create are determined by module access [privileges](#).

Detection Notification Rules

Receive notifications about detections that match specific criteria. [Learn more about creating detection notification rules.](#)

Detection Catalog Notification Rules

Receive notifications when new detection types become active on your ExtraHop system. [Learn more about creating detection catalog notification rules.](#)

Threat Briefing Notification Rules

Receive notifications whenever a new threat briefing is published or automatically restored. [Learn more about creating threat briefing notification rules.](#)

System Notification Rules

Receive notifications whenever system events occur such as sensor connection concerns, unsupported firmware versions, and license issues. [Learn more about creating system notification rules.](#)
