

Configure license expiration notifications for Discover and Command appliances

Published: 2019-01-08

By configuring an email group to receive system health notifications, you can receive an email when your ExtraHop Discover or Command appliance license is about to expire along with other general system health information. Email is sent seven days before license expiration and periodically after the initial notification.

Before you begin

You must have unlimited privileges to access the ExtraHop Admin UI before you can configure system health notifications.

1. Log into the Admin UI on a Discover or Command appliance.
2. In the Network Settings section, click **Notifications**.
3. Click **Email Notification Groups**.
4. Complete one of the following steps to select the group to receive notifications:
 - From the table, click the name of an existing email group.
 - Click **Add Group** and type a name for the group.
5. Click the **System Health Notifications** checkbox.
6. In the **Email Addresses** text box, add or remove recipient email addresses for the group.
You can type one email address per line or in a list separated by a comma, semicolon, or space. Email addresses are checked only for [name]@[company].[domain] format validation.
7. Click **Save**.

Next steps

Contact your ExtraHop representative to renew your license, then follow the instructions to [apply your updated license](#).
