Integrate RevealX 360 with IBM QRadar SIEM

Published: 2025-03-04

FULL CONTENT TO BE PUBLISHED SOON...

This integration enables IBM QRadar SIEM to export detection data from the ExtraHop system through detection notification rules. You can view exported data in the SIEM to gain insight into security threats in your environment and accelerate response times.

This integration works by establishing a connection between ExtraHop RevealX and the SIEM that receives webhook data that you specify by creating detection notification rules.
